

EarthSentials Streamlining Body Contouring Wrap

What happens?

Compression bandages are soaked in a prepared clay solution prior to the treatment. After exfoliation the body is wrapped. The therapeutic action of a wrap is based on gentle constriction and compression of the skin and lymphatic system, which helps the mobilisation of internal fluids, the absorption of body toxins by the clay, and the elimination of wastes out of the body. The Steamy Wonder Steam Canopy can be used to help detox the body. The combination of using moist steam along with essential oils and herbs boosts the elimination system to function more effectively.

What are the benefits?

The wrap helps to extract and flush out toxins produced by waste. It reduces stagnant body fluids and detoxifies the body. This is a clean wrap and no shower is necessary after the treatment.
